

RevWood Maintenance Information

RevWood flooring pairs the beauty of natural wood with easy, carefree maintenance. You'll get years of beautiful performance from your wood floors with a little preparation and know-how.

Use a dust mop, soft bristle broom or a vacuum cleaner with suction only (no beater bar or with the beater bar disengaged) to remove dust, dirt and loose particulate on a regular basis. DO NOT use rotating beater bars, floor scrubbers, steamers, jet mops, buffers or similar products.

When it comes to RevWood, always avoid mopping with water and dry up any water spills immediately. Dust mop is the primary cleaning method.

Legacy Premier Homes installs RevWood Plus in the majority of our homes.
